Hi Jennifer,

I was waiting a bit since I was hoping that the paper would have been accepted by now. But, we haven't heard from the journal yet. Regardless, I'm providing regression coefficients for cumulative exposure for NPC with follow-up through 2004.

## Ex. 5 Deliberative Process (DP)

Please let me know if you need anything else.

Laura

hi, Laura. i just wanted to follow-up on this to make sure it hadn't fallen through any cracks. i certainly know how that can happen. we hope that you can still provide us with the regression coefficients that we requested, at your earliest convenience. thanks!  
jennifer

Jennifer,

We are just getting ready to resubmit the paper back to a journal, hopefully for acceptance. We will let you know as soon as it is accepted, and in the meantime, will work on getting you the regression coefficients. Just to confirm, you're only interested in cumulative exposure, and not in the other metrics?

Laura

**Subject:** formaldehyde NPC results

hi, Laura. thanks so much for all your previous help in supplying us with some of your lymphohematopoietic cancer results for formaldehyde. now i have a question about NPC that i'm hoping you can help with. currently our risk estimate for NPC is incorrect because it relies on the 1994 follow-up results with the 1006 misidentified deaths. we would ideally like to update that with results from the 2004 follow-up. do you have any idea when the updated solid cancer paper will be published? or when you might be able to share the NPC findings with us? if that is not imminent, would it be possible for you to share with us the corrected regression coefficients for NPC based on the 1994 follow-up but with the 1006 correctly identified deaths? specifically, we would need the regression coefficients and their standard errors for the trend tests for NPC and the cumulative exposure metric with all person-years and with the exposed person-years only. any information that you can supply us with would again be greatly appreciated. thanks!

jennifer
